

## FACT SHEET No. 2

### ZOONO - TOP 10 KEY FACTS

Zoono is a totally unique antimicrobial product. It should not be compared to other antimicrobial products for 10 key reasons:

- 1. Zoono does not kill bacteria by poisoning:**  
This means that there is no possibility of bacteria building up any immunity (no super-bugs).
- 2. Zoono is colourless and odourless:**  
This means that there are no unpleasant odours / no stains.
- 3. Zoono kills mechanically – NOT by poisoning / gassing:**  
This means that when the Zoono technology is applied (and allowed to dry) it leaves a thin bonded film that resembles millions of sword shaped road spikes – spikes that attract and kill bacteria. Because Zoono technology does not change during this process, one single application can last for a month or more (depending on the surface, usage and the application).
- 4. Zoono lasts longer than chemical products:**  
Chemicals are only effective until such time that the surface is contaminated again. This can occur almost immediately – even something as innocent as a hand touching a surface or a handshake can re-contaminate the area with bacteria. Do you know how long your current sanitiser lasts?
- 5. Zoono is safe to use:**  
Zoono technology has FDA recognition, EPA, TGA and ERMA registrations plus NZFSA Approvals and as such is safe to humans and animals alike. It has a similar “toxicity” rating to Vitamin C.
- 6. Zoono is environmentally friendly:**  
Zoono technology is made from raw organic compounds. There is no harm to drains / waterways if Zoono enters the system. In fact, Zoono helps with the water treatment process.
- 7. Zoono does not leach:**  
Because there is no leaching (once dried, there is no transfer from surface to surface), Zoono technology is not only food safe but safe for use within the critical hygiene areas within child care, aged care centers, medical facilities and hospitals.
- 8. Zoono has been extensively tested / accredited:**  
These tests have been conducted at several Universities and accredited Laboratories within USA, Australia and New Zealand. As such, all claims / test results are certified, verified and documented.
- 9. Zoono is ready to use:**  
All products are ready for application and do not require mixing or diluting. For best results, apply either as a spray & wipe or via a fogging (misting) application. Depending on the amount applied and weather conditions, Zoono technology usually dries in a matter of minutes.
- 10. Zoono has a proven track record against bacteria, mould, fungi and viruses:**  
A complete list of tested products is available
